1. Amendments to the commodity list as from 1 January 1993	135

1. Purpose

The purpose of the external trade statistics is to give information about the commodity flows between Norway and other countries. The statistics intend, as far as possible, to meet the demands from industry or trade for data in their planning of production, sales and marketing activities. In addition, the statistics make an important part of the data basis for prognoses and analyses performed by private organizations, public authorities, research institutions etc. International organizations, like UNs Statistical Office, and others, make an extensive use of information from the external trade data, as supplied by the individual countries. The statistics form integrating parts of the national and international statistical systems and are also utilized for the preparing of national accounts and balance of payment statistics. Accordingly, internationally adopted definitions as well as standards of commodity and country classifications are of great importance.

2. The source material

The external trade statistics are based on information collected by the customs authorities in conjunction with imports and exports of goods. For the preparation of the data, the Central Bureau of Statistics receives copies of the commodity declarations forms from the Customs, filled in by importers and exporters, respectively. Information on imports and exports of special equipment, i.e. ships, electric current and imports or exports falling outside the Customs' area, like equipment imported directly to the Norwegian part of the continental shelf or crude oil and natural gas, exported by pipeline from the shelf, are based on special reports. Complete figures for imports directly to the Norwegian part of the continental shelf are only available as estimates in the balance of payment statistics. The Norwegian Petroleum Directorate reports monthly the quantity of oil exported from the oil fields in the North Sea. The same authority monthly also submits reports on the quantities of gas exported by pipeline.

3. Coverage

The coverage of the statistics is mainly in accordance with the recommendations of the United Nations Statistical Commission and relates to the general trade principle. The difference between the special trade and the general trade mainly consists of

different recording of goods passing through bonded warehouses. Direct imports are recorded at the time of customs clearance. Goods coming through bonded warehouses are recorded as imports when they enter these warehouses, as exports when they are sold abroad from the warehouses. According to the special trade, however, imports are re-corded in the statistics when the goods are cleared by the customs, whereas re-exports from the warehouses would be excluded from the export statistics. The statistical area of Norway includes the Norwegian part of the continental shelf, Svalbard and Jan Mayen with Bjørnøya. Commodities with a value less than 1 000 kroner are not included in the statistics.

Excluded from the statistics are i.e. direct transit trade, consignments of limited values, goods and equipment for temporary use, returned merchandise, repair trade, personal luggage and belongings and supplies under military defence agreements. For further details, see the publication External Trade.

4. Definitions

4.1. Commodity classifications

As from 1988 the commodities are grouped according to The Harmonized Commodity Description and Coding System (HS), a six digits combined statistical/tariff nomenclature. The international codes are in Norway expanded with two digits for national purposes. The Norwegian Commodity list valid as from 1993, specifies about 6 400 commodities by eight digit codes. From 1988 United Nations Standard International Trade Classification, Rev. 3, is also introduced. This is a classification of 3 100 commodity items directly linked to the Harmonized System. The CBS prepares publications based on HS as well as SITC, Rev. 3.

4.2. Quantities

Net weight is used in the tables except for imported goods where the duty is calculated according to the Customs Tariff of the weight of the goods including their packings (for example canned goods). The Commodity List also shows the commodity items which in addition to kilogrammes are registered in other quantity units.

4.3. Valuation

The value of the imports represents the c.i.f. value, and the value of the exports represents the f.o.b. value at Norwegian port or land boundary, eventually at the statistical "border". The value of oil produced on the Norwegian part of the continental shelf and

further exported is calculated from Customs' declarations and norm prices determined administratively and adjusted for the transport and terminal costs. The export value of natural gas is based on data found in the official import statistics of the partner countries and other published reports.

4.4. Geographical classification

In all tables with country distribution imported commodities are grouped by country of origin (production) and exported commodities by country of destination.

The following definitions are used:

Country of origin (production) is for crude materials defined as the country in which the goods are produced, and for manufactured goods, including

refined products, as the country of final processing, not counting re-packing, sorting and blending (except blending of tea).

Country of consignment is defined as the country from which the goods are shipped to Norway without any commercial transaction intervening (transshipment not counting).

Country of destination is defined as the country which at the time of exportation is the last known country to which the goods are shipped, directly or through other countries, without any commercial transaction intervening (transshipment not counting).

The country code follows mainly the ISO (International Organization for Standardization) alpha code. In 1987 and in the previous years, a three digit code was used.
