

Holiday Survey 2005

This series consists mainly of primary statistics, statistics from statistical accounting systems and results of special censuses and surveys. The series is intended to serve reference and documentation purposes. The presentation is basically in the form of tables, figures and necessary information about data, collection and processing methods, in addition to concepts and definitions. A short overview of the main results is also included

The series also includes the publications Statistical Yearbook of Norway and Svalbard Statistics

Preface

In this publication Statistics Norway presents the main results and the documentation of the holiday survey.

The survey has been organised by the Division for Sample Service. The Division for Transport and Tourism Statistics has analysed and published the material.

The statistics are adapted to the EU directive on tourism, Council Directive 95/57/EC of 23 November 1995 on the collection of statistical information in the field of tourism. The directive requires statistics on the Norwegian's holiday making on three levels: tourist, trip and overnight stays.

This publication contains information like the holiday patterns of different population groups, holiday destinations, types of accommodation and modes of transport.

The main results from the holiday survey are published on the Internet on the URL:
http://www.ssb.no/English/subjects/00/02/20/ferie_en/.

Adviser Nina Arnesen has prepared the publication. Responsible for this publication is Head of Division Mr Leiv Solheim, Division for Transport and Tourism Statistics.

5. Number of nights spent on holiday by main destination and average number of nights spent on holiday per person and per trip by different criteria. 2005	16
6. Percentage of tourists on holiday, by season in different population groups. 2005	17
7. Number of holiday trips by main destination and different criteria. Summer 2005. 1 000	18

1. Main results

Foreign travel most popular

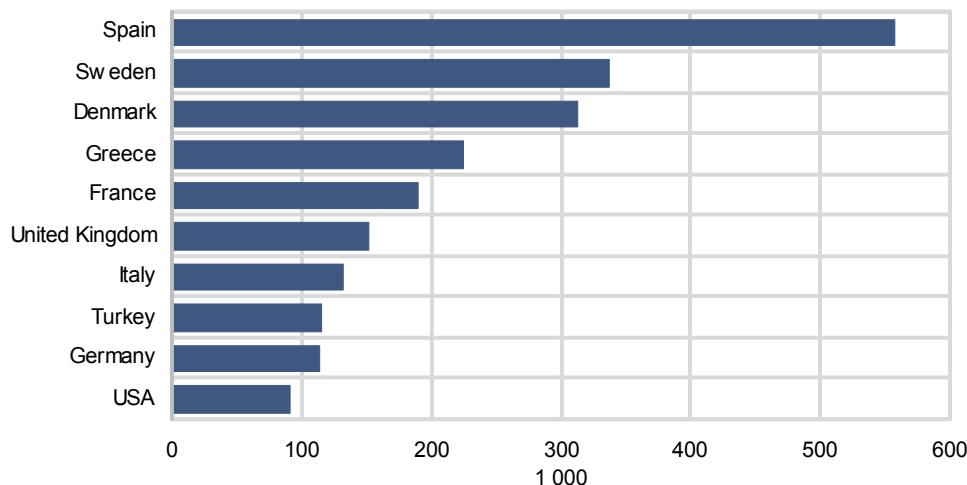

The total number of holiday trips abroad was 3.1 million in 2005. This is the highest figure ever recorded and is an increase of 37 per cent since 1999. Residents of the Eastern Norway (Akershus and Oslo, Hedmark and Oppland and South Eastern Norway) area accounted for more than 50 per cent of foreign holidays.

In total, 2.6 million Norwegians aged between 16 and 79 went on 5.9 million holiday trips lasting at least four nights in 2005. This is an increase of 1.4 per cent from the previous year. The number of trips where Norway was the destination continued to fall, whereby all growth in holiday trips was in the holidays abroad. Out of 55 million overnight stays last year, 59 per cent were abroad.

Spain remained the most popular destination for Norwegians, with over half a million holiday trips in 2005. Sweden was the second most popular country, followed by Denmark. In fifth place, France had an increase of 40 per cent from 2004.

Norwegians' most popular holiday destinations in Norway were the counties in the west of Norway: Hordaland, Sogn & Fjordane, and Møre & Romsdal, followed by the counties of Buskerud, Oppland and Hedmark.

Figure 1. Number of holiday trips to the most visited destinations abroad. 2005. 1 000

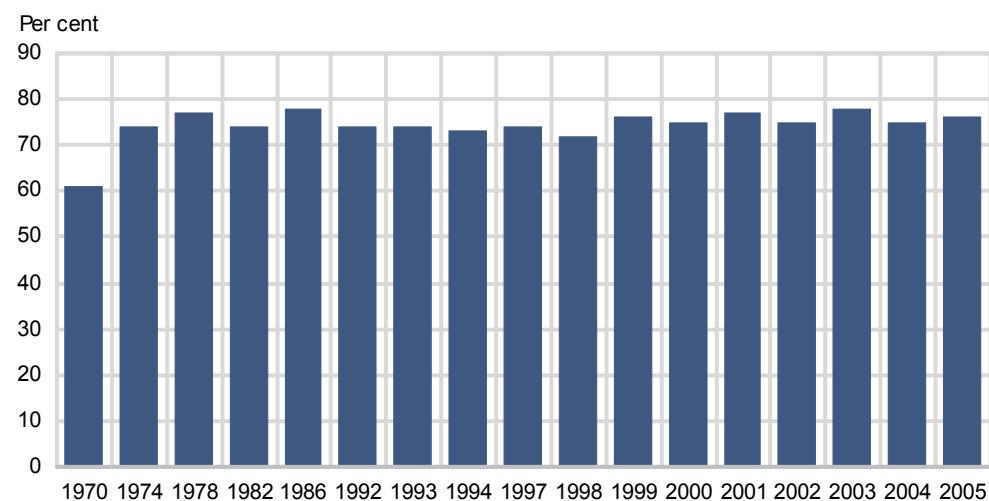

Flying abroad

For Norwegians, air transport is now most popular, ahead of driving. In 2005, we went by plane on 46 per cent of all holiday trips, and a total of 74 per cent of the foreign trips. The number of holiday trips by plane increased by 12 per cent from 2004, while driving holidays decreased by 6 per cent for the same period. Avinor's statistics of passenger traffic show an increase in foreign traffic in 2005, and increased 30 per cent since 1999.

With regard to foreign holidays, hotels were the most popular type of accommodation, in contrast to holidays in Norway where use of own holiday homes or other type of private accommodation are preferred.

Women travelled most

A total of 76 per cent of the Norwegian population aged between 16 and 79 went on holiday in 2005. The proportion of women and men who travelled on holiday is almost equal. The average number of holiday trips in the population was 1.7 per capita. Among holidaymakers, the figure was 2.2 holiday trips per person. Women went on more holiday trips than men in 2005, with 54 per cent of all trips being made by women.

Figure 2. Percentage of Norwegians on holiday. 1970-2005. Per cent

Akershus and Oslo continued to have the highest proportion of persons that travelled on holiday in 2005, with 86 per cent of the population. Residents of Hedmark and Oppland travelled the least, with 67 per cent of the population. Fifty-three per cent of the holidays trips were made by persons with incomes of more than NOK 500 000. The proportion of households with a total household income of more than NOK 500 000 was 37 per cent in 2004.

Growing numbers spend summer holidays abroad

Summertime is by far the most popular holiday season, with 65 per cent of the population travelling on holiday in the summer of 2005. The number of summer holiday trips in Norway continued to fall in 2005. For the first time, we travelled on more trips abroad than in Norway during the months May to August.

It is becoming increasingly popular to travel on holiday in the winter, with 25 per cent of the population going away during the winter break.

Expenditure

The total expenditure on holiday trips was NOK 41.8 billion in 2005. NOK 10.1 billion of this was spent in Norway, and NOK 31.7 billion spent abroad. The total expenditure on package holidays was NOK 6.3 billion.

Table 1. Tourist expenditure, total and package travel. 2005. NOK billion

	Tourist expenditure, total		Tourist expenditure, package travel		
	Total Domestic trips	Outbound trips	Total Domestic trips	Outbound trips

2005	41.790	10.060	31.729	6.343	6.215

2. Background and purpose

2.1. Purpose and history

The purpose is to obtain information about Norwegians holiday habits in Norway and abroad. The survey was carried through every 4th years from 1968 until 1986 and the years 1991/92, 1992/93 and 1993/94. From 1997, the survey has been carried out annually.

2.2. Users and applications

The Ministry of Trade and Industry, the Norwegian Tourist Board, trade organisations, research institutes and International organisations like Eurostat use the statistics.

3. Statistics production

3.1. Population

The statistics cover a sample of the Norwegian population in the age group 16-79 years, and their holiday trips lasting at least 4 consecutive nights.

3.2. Data sources

The Statistics Norway's Omnibus survey.

The National Population Register is used when defining the population and drawing the sample.

3.3. Sampling

The holiday survey is carried out among 2000 Norwegians between 16 and 79 years.

3.4. Collection of data

The data collection is mainly done by telephone interviews. It is voluntarily to participate in the survey.

3.5. Control and revision

A computer is used during the interview. The interviewer reads the questions aloud from the screen and the answers are registered instantly. This allows the data to be controlled immediately, and it reduces the risk of asking the interviewee wrong questions.

3.6. Estimation

The data is meant to represent the whole Norwegian population in the age group 16-79 years, not only the sample. In order to calculate totals, the data is grouped in four age groups (16-24 years, 25-44 years, 45-64 years and 65-79 years) and sex. Variables like number of tourists, number of trips, number of overnight stays and tourist expenditure are multiplied by a factor, which is defined as the size of the population in the current strata divided by number of respondents in the same strata.

3.7. Confidentiality

Not relevant.

4. Concepts, variables and classifications

4.1. Definition of the main concepts and variables

The data in the holiday survey allows us to look at the information on three different levels: the person, the trip and the overnight stays.

Holiday trip A holiday trip is a stay away from the ordinary place of residence with holiday as the purpose and of minimum four nights duration.

<i>Overnight stay</i>	If one has spent the night somewhere it is defined as an overnight stay whether one has slept or not.
<i>Region of residence</i>	<p>Following regions of residence are used in the survey:</p> <p>Akershus and Oslo correspond to the counties of Akershus and Oslo.</p> <p>Hedmark and Oppland correspond to the counties of Hedmark and Oppland.</p> <p>South Eastern Norway corresponds to the counties of Østfold, Buskerud, Vestfold and Telemark.</p> <p>Agder and Rogaland correspond to the counties of Aust-Agder, Vest-Agder and Rogaland.</p> <p>Western Norway corresponds to the counties of Hordaland, Sogn & Fjordane and Møre & Romsdal.</p> <p>Trøndelag corresponds to the counties of Sør-Trøndelag and Nord-Trøndelag.</p> <p>Northern Norway corresponds to the counties of Nordland, Troms and Finnmark.</p>
<i>Destination</i>	<p>Following domestic destinations are used in the survey:</p> <p>Akershus and Oslo correspond to the counties of Akershus and Oslo.</p> <p>Buskerud, Hedmark and Oppland correspond to the counties of Buskerud, Hedmark and Oppland.</p> <p>Østfold and Vestfold.</p> <p>Agder and Telemark correspond to the counties of Aust-Agder, Vest-Agder and Telemark.</p> <p>Western Norway corresponds to the counties of Rogaland, Hordaland, Sogn & Fjordane and Møre & Romsdal.</p> <p>Trøndelag corresponds to the counties of Sør-Trøndelag and Nord-Trøndelag.</p> <p>Northern Norway corresponds to the counties of Nordland, Troms and Finnmark.</p>
<i>Seasons</i>	<p>The holiday year 2005 is divided into the following seasons:</p> <p>Winter: From 01 January 2005 to 10 March 2005.</p> <p>Easter: From 11 March 2005 to 28 March 2005.</p> <p>Spring: From 29 March 2005 to 30 April 2005.</p> <p>Summer: From 01 May 2005 to 31 August 2005.</p> <p>Autumn: From 01 September 2005 to 09 December 2005.</p> <p>Christmas: From 10 December 2005 to 31 December 2005.</p>
<i>Main destination</i>	The main destination is defined as the place one has stayed the most nights. If the person has spent an equal number of nights more places, the first place is chosen as the main destination.
<i>Main mode of transport</i>	The main mode of transport used to and from the main destination.
<i>Tourist expenditure</i>	Tourist expenditure is the total consumption made during the trip and stay at destination. It includes the consumption made by visitor or on behalf of a visitor.

4.2. Standard classifications

Regional Classifications. An Overview of Standards in Norwegian Official Statistics. Statistics Norway. NOS C513

5. Sources of error and uncertainty

5.1. Measurement and processing errors

Collection errors, like when the interviewee gives incorrect information, or processing errors, like when the interviewer registers the answer incorrectly, are tried kept to a minimum by automatically controlling the answers during the interview. Nevertheless, there may still be some errors left. The number and kind of errors are not known.

5.2. Non-response errors

Non-response errors are caused by unit non-response, i.e. the unit (for instance an individual or a company) has failed to respond, or item non-response, i.e. the unit has failed to respond to some but not all the questions in the survey. The unit non-response is less than 30 to 35 per cent, and the item non-response is at a minimum level.

5.3. Sampling errors

Sampling bias may arise when the distribution of some variables in the sample is not the same as the corresponding distribution in the population. The results in this survey are based on the information provided by those responding. Non-response is mainly due to the interviewee not wanting to participate or that he/she was not reached by the interviewer. If the interviewee was not reached due to he/she being on holiday, the distribution of this variable among those interviewed and the non-respondents may differ and sampling bias may arise.

The holiday survey is carried out among a sample of Norwegians between 16 and 79 years of age. The uncertainty of findings based on only a part of the population, (sampling variance) depends among other factors on the number of observations in the sample and on the distribution of the current variable in the whole population. An estimate of this uncertainty (standard deviation) can be constructed by means of the observations in the sample.

There is not made an exact calculation of the standard deviation for this survey. However, by using the figure underneath one can find the expected standard deviation for a survey like the holiday survey.

Figure 3. Expected standard deviation for observed percentages by different sample sizes

Number of observations	5/95	10/90	15/85	20/80	25/75	30/70	35/65	40/60	50/50
25	5,4	7,5	8,9	10,0	10,8	11,5	11,9	12,2	12,5
50	3,8	5,2	6,2	7,0	7,6	8,0	8,3	8,6	8,7
100	2,7	3,7	4,4	4,9	5,3	5,6	5,9	6,0	6,2
200	1,9	2,6	3,1	3,5	3,8	4,0	4,1	4,3	4,3
300	1,5	2,1	2,5	2,8	3,1	3,2	3,4	3,5	3,5
500	1,2	1,6	2,0	2,2	2,4	2,5	2,6	2,7	2,7
1000	0,8	1,2	1,4	1,5	1,7	1,8	1,8	1,9	1,9
1200	0,8	1,1	1,3	1,4	1,5	1,6	1,7	1,7	1,8
1500	0,7	0,9	1,1	1,3	1,4	1,4	1,5	1,5	1,6
2000	0,6	0,8	1,0	1,1	1,2	1,3	1,3	1,3	1,4

5.4. Other sources of error

For previous surveys including the holiday year 2002 there was a difference between the holiday year and the calendar year. The holiday year went from November in the year before to October in the year of reference. The change into following the calendar year has consequences for the autumn and Christmas seasons. Previously the Christmas season was from the year before the year of reference and the autumn season included November and parts of December from the year before the year of reference and September and October from the year of reference.

6. Comparability and coherence

6.1. Comparability over time and space

The holiday survey in its present form was established in 1997 and revised in 2000 to meet the requirements from Eurostat. Since 1997 the survey has been carried out

annually. In addition, there are corresponding surveys carried out every 4th year from 1968 to 1986. These are comparable with the present survey.

6.2. Coherence with other statistics

The annual Holiday Survey covers all holiday trips with at least 4 overnight stays, while the quarterly Travel Survey covers all types of trips (both holiday trips and trips with occupational purpose) with at least 1 overnight stay. Both surveys cover long holiday trips and in that way overlap each other.

7. Availability

7.1. Publications and other links

The statistics are published on the Internet http://www.ssb.no/ferie_en/

The Statistics Norway's Omnibus survey is documented on the Internet
<http://www.ssb.no/vis/omssb/oppdrag/omnibus.html> (Norwegian only).

A report for the holiday year 1998 is published on the Internet
http://www.ssb.no/emner/00/02/20/ferie/rapp_9933/rapp_9933.pdf

7.2. Microdata

Micro data are stored in Ascii-format and in SAS-files.
