

## **Salmon and Sea Trout Fisheries 2007**

This series consists mainly of primary statistics, statistics from statistical accounting systems and results of special censuses and surveys. The series is intended to serve reference and documentation purposes. The presentation is basically in the form of tables, figures and necessary information about data, collection and processing methods, in addition to concepts and definitions. A short overview of the main results is also included

The series also includes the publications Statistical Yearbook of Norway and Svalbard Statistics

## Preface

This publication presents data on fishing for salmon and sea trout in rivers and in sea. Further, tables are presented on fishing for escaped farmed fish separately.

Additional information for sea and river fishing is presented on the web-pages of Statistics Norway. Figures for each river on river fishing, or for each municipality on sea fishing, may be found here. The web-address is:  
<http://www3.ssb.no//statistikkbanken/>.

The entire publication is presented on the web in PDF format, but the tables can be downloaded in Excel format. The web-address is:  
<http://www.ssb.no/English/subjects/10/05>.

The publication has been prepared under the supervision of Ms. Anne Turi Baklien. Responsible Head of Division is Ole Osvald Moss, Division for Primary Industry Statistics.

Statistics Norway

## 1. Introduction

The statistics for river fishing of salmon (*salmo salar*), sea trout (*salmo trutta*) and migratory char (*salvelinus alpinus*) was earlier based upon catch journals collected by the salmon fishery boards. As from 1993 the statistics is based upon catch journals collected by county authorities. The statistics for sea fishing of salmon and sea trout is based upon catch journals mailed directly to Statistics Norway by the fishermen themselves.

As from 1997 the Directorate for Nature Management (DN) opened for specific fishing for escaped farmed fish in the counties of Rogaland, Hordaland, Sogn og Fjordane, Møre og Romsdal, Sør-Trøndelag, Nord-Trøndelag, Nordland and Troms. The time period for this particular fishing is between 1 October and 28 February.

The catch statistics is important for the national and international management of anadromous salmonids.

## 2. Sources and methods

### 2.1. Coverage

The statistics refer to all catch by wedge-shaped seine and bend net of salmon and sea trout irrespective of whether the fish has been sold, stored, used for own household or given away. Because of missing basis of calculation, the value of catch will not be published from the year 2000. Today all Norwegian catch of salmon takes place within the limit of the 12 nautic miles fishing zone. Up to 1975 the Norwegians were also fishing beyond this zone and off Greenland. The catch outside the fishing zone has not been included in the ordinary statistics.

The demarcation of sea fishing and river fishing is set to the river/sea border outside the river/brook outlet. The municipalities draw the border between the river and the sea with authority in the Salmonids and Fresh-water Fish Act of 15 May 1992. The border should normally be marked by a sign. The area within 100 meters of the river outlet or the river/sea border is normally protected. In addition, some areas outside this area can be defined as a protection zone.

### 2.2. Sources of data and data collection

#### *Sea fishing*

The statistics of sea fishing is based on catch journals filled in by the fishermen themselves and sent to Statistics Norway by the end of the fishing season. Statistics Norway yearly receives an updated register of fishermen from the county authorities. This register enables Statistics Norway to send reminders to fishermen, asking for missing catch journals.

#### *River fishing*

The statistics of river fishing is based on various catch reports collected by land owners and sent to the county authorities. These authorities compile the data for each watercourse and forward the results to Statistics Norway on the Internet.

### 2.3. Verification of data

On sea fishing Statistics Norway transmits the data from catch journals to it-media. Automatic quality controls are introduced, searching for absolute as well as possible errors. Possible errors refer to the average weight of the fish. The county authorities verifies data on river fishing.

### 3. Concepts and Variables

*Weight.* The fish weight is stated in kilos live weight. Before 1993 the figures for salmon were specified into two groups: Salmon 3 kilos and over and salmon under 3 kilos. From 1993 the figures are specified into three groups: Salmon under 3 kilos, salmon between 3 and 7 kilos and salmon over 7 kilos.

### 4. Errors and inaccuracy

Missing or late catch journals are often a problem. The statistics is therefore not complete, and the quality of the data vary between the watercourses. In particular, data from small rivers, where the fishing is weakly organised, are incomplete and less reliable. To some extent rough estimates are used to replace erroneous or missing data.

Despite some of the deficiencies described above, the statistics is considered to give fairly correct picture of the development of the year to year catch of fish.

## 5. Some main results

### 5.1. Sea fisheries

In 2007, total catch of salmon and sea trout was 438 tonnes, of which 428 tonnes were salmon.

The average weight of salmon caught in 2007 was 4.8 kilos. 13 per cent of the salmon was under 3 kilos, 51 per cent between 3-7 kilos and 36 per cent over 7 kilos. Catch of pink salmon are included in salmon under 3 kilos.

### 5.2. River fisheries

In 2007, total catch of salmon, sea trout and migratory char was 415 tonnes, of which 341 tonnes were salmon. Tana was the most important watercourse in 2007, with a total catch of 48 tonnes, followed by Gaulavassdraget, Orkla, Namsenvassdraget and Altaelva.

The average weight of salmon caught in 2007 was 3.5 kilos. 25 per cent of the salmon was under 3 kilos, 42 per cent between 3-7 kilos and 33 per cent over 7 kilos.

### 5.3. Fishing for escaped farmed salmon 2007/2008

The total catch of escaped farmed fish was 17.2 tonnes, of which 16.5 tonnes were salmon and 0.7 tonnes were sea trout. The average weight for salmon was 3.9 kilos, and for sea trout 2.5 kilos.

8.4 tonnes of escaped farmed fish was taken with bend nets, 3.9 tonnes with set nets and 4.9 tonnes was taken with wedge-shaped seines.

## **5.4. Development of salmon and sea trout fisheries in Norway**

Overall, the stocks have been reduced in the whole area for North Atlantic salmon. The reduction can be due to natural cycles, temporary poor conditions or too high exploitation.

The negative development of the salmon fishery in the eighties caused comprehensive restrictions in sea catch of salmon as from 1989. Drift net fishing was forbidden and use of bend net limited. Also the season for river fishing was reduced. In rivers important for spawning, fishing was totally forbidden.

In the ordinary statistics over salmon and sea trout fishery no distinction is made between wild salmon and escaped farmed salmon. The fraction of escaped farmed salmon has been increasing and the statistics do not give a right picture of catch of wild salmon.

According to the Directorate for Nature Management the share of escaped farmed salmon in 2007 is calculated to 34 per cent of the sea catch along the coast and 26 per cent in the fjord areas. The share of escaped farmed salmon of angling in rivers is calculated to 9 per cent in 2007.

## **6. Additional information**

### **6.1. Internet dissemination**

Statistic Norway has web-pages on the Internet. The web-address is:

<sup>1</sup> Refers to fishing within the Norwegian fishing zone. <sup>2</sup> From 1979 statistics on drift net fishing is based on catch journals from the fishermen. <sup>3</sup> As from 1989 drift net fishing is forbidden. <sup>4</sup> From 1993 there has been new routines for data collection. See chapt. 1 and 4.

<sup>1</sup> From 1979, statistics on drift net fishing is based on catch journals from the fishermen. As from 1989 drift net fishing is forbidden. <sup>2</sup> From 1993 data on migratory char are not registered. <sup>3</sup> From 1993 there has been new routines for data collection. See chapt. 1 and 4.

## 5. Sea fishing. Catch, by fishing gear used. 1966-2007.
